

Electricity Merit Badge

Week 2

Stations

1. **Power Generation and Distribution – 40 min**
2. Household Electrical – 40 min

Power Generation

- Mechanical Power Source turns the rotor of a Generator
- Moving Conductor in a magnetic field causes a voltage
- Connected circuit causes a current to flow

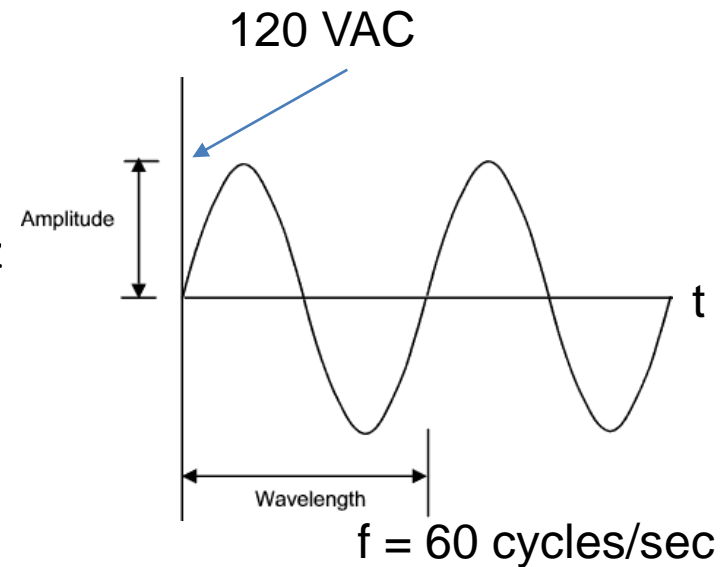

AC vs DC

Alternating Current (AC) – Current flow changes direction periodically

- Direction changes 60 times per second in US = 60 Hz

Examples of AC usage:

1. Production and transportation of electricity
2. Home and office outlets
3. Appliances

Direct Current (DC) - Current only flows in one direction

Examples of DC usage:

1. Cell Phones and Computers
2. Electricity in cars.
3. Anywhere you use a battery for power.

AC vs DC Generators

AC Electric Generator

DC Electric Generator

Key Difference Is the Slip Rings vs the Commutator

Diesel Generator

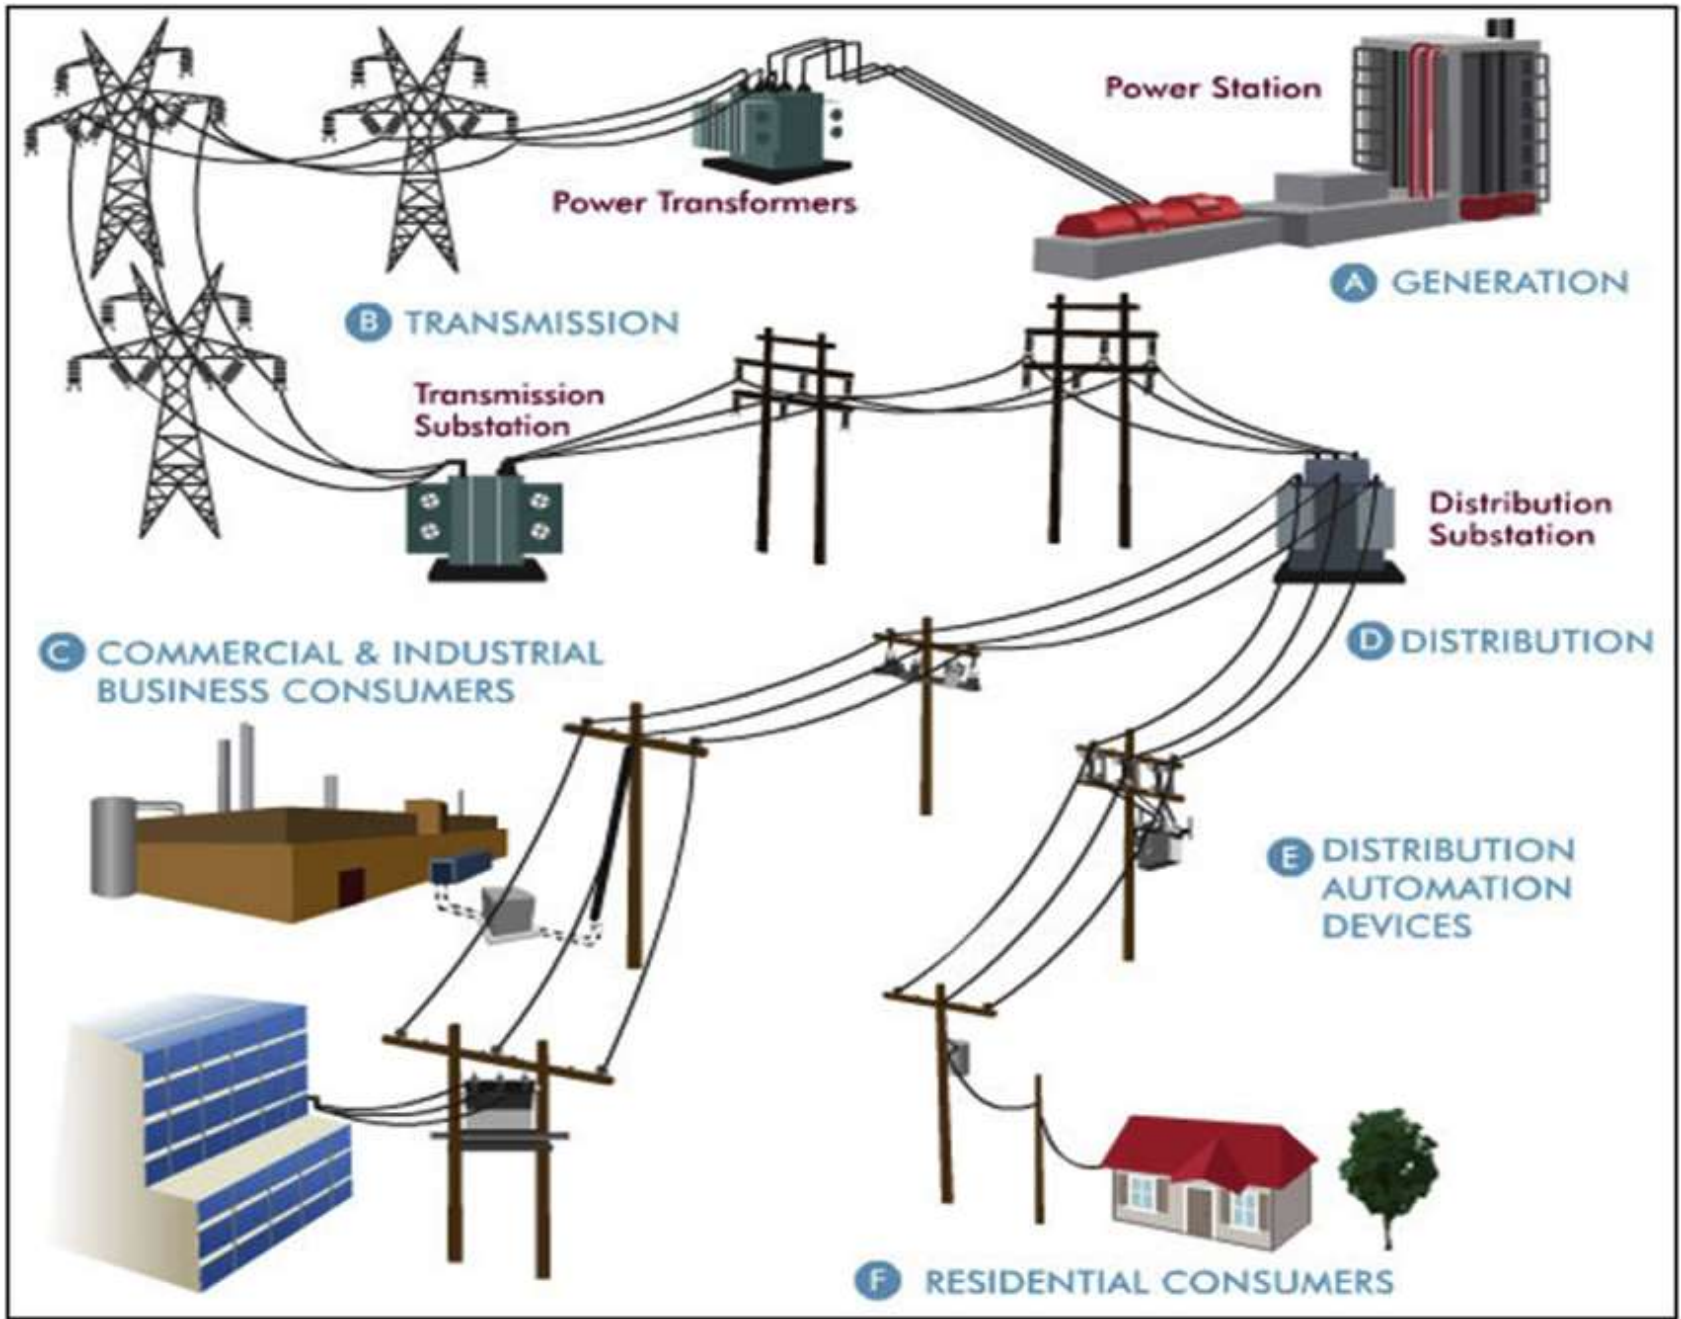

Diesel
Engine

Electric
Generator

Types of Generators

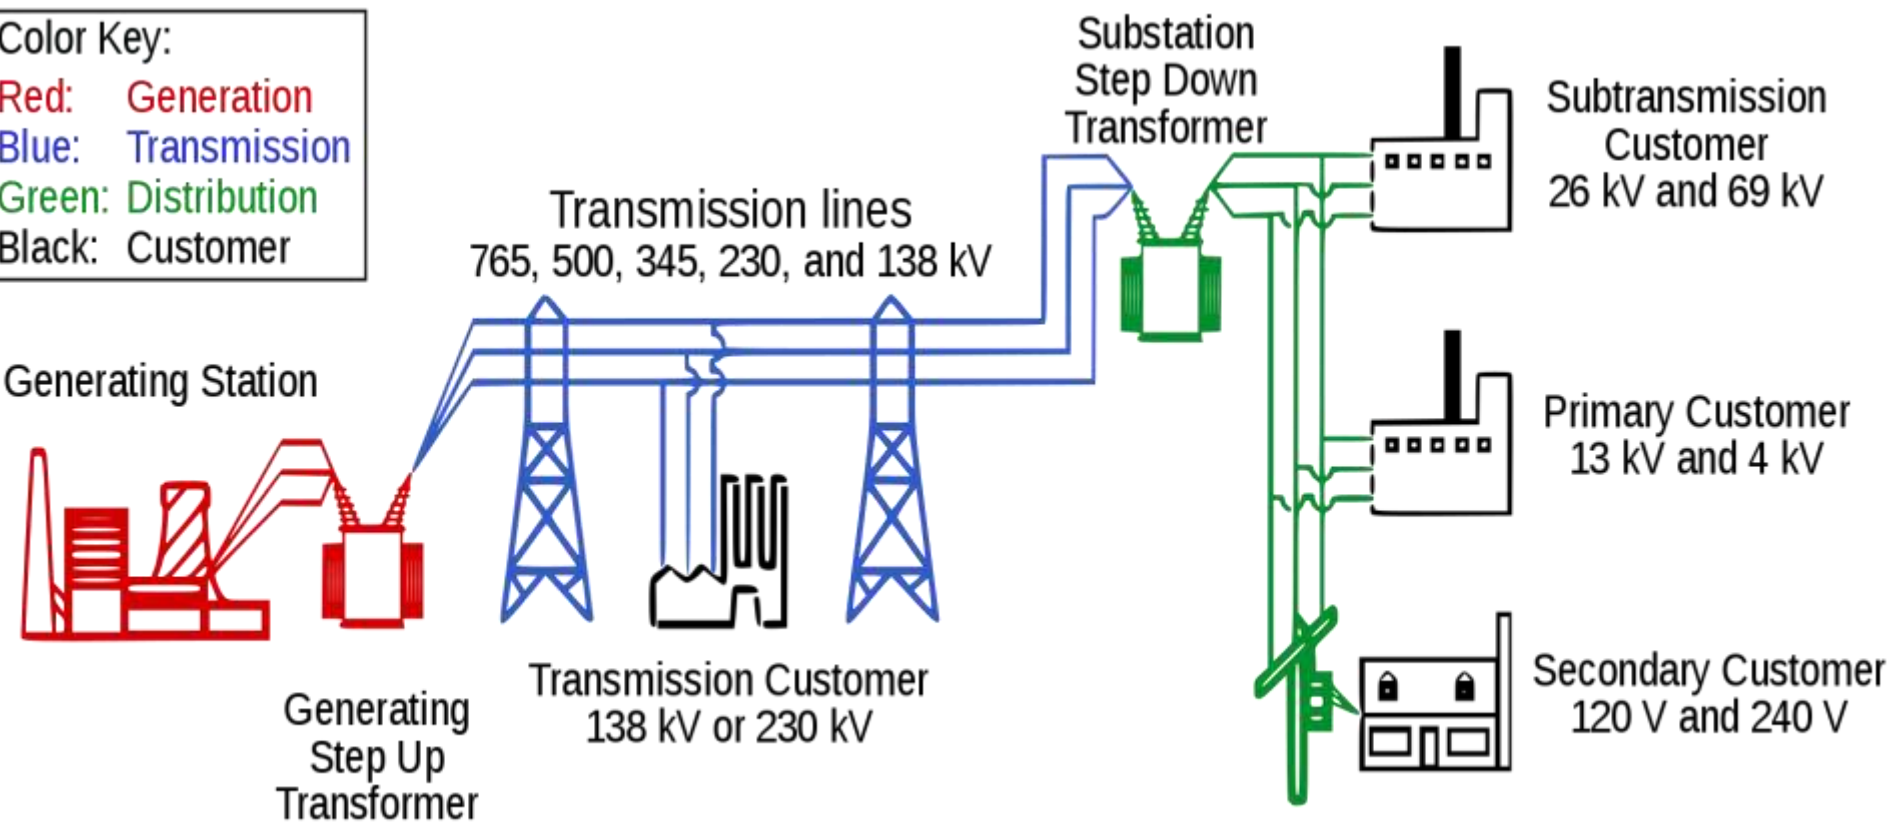

- **Nuclear Power Plant** – Nuclear core generates heat to boil water that turns a turbine
- Coal Power Plant – Coal is burned to heat water, create steam and turn a turbine
- Natural Gas Power Plant – NG is burned to heat water, create steam and turn a turbine
- **Hydro-electric, Tidal** – water pressure turns a turbine
- **Wind** – wind power turns a turbine
- **Geo-Thermal** – hot water from the ground turns a turbine
- Diesel Generator and Gas Turbine
- Solar– works differently, Solar Cell creates voltage diff

Transmission Voltages

Color Key:
Red: Generation
Blue: Transmission
Green: Distribution
Black: Customer

Transformers

Single phase

Core type

Why Change Voltages?

Power company sends 120,000 watts to a shopping center

- $P = V * I$
- $120,000 = 120V * I$
- $I = 1,000$ amps
- BIG wires
- BIG pole to hold the BIG wires

- $P = V * I$
- $120,000 = 120,000V * I$
- $I = 1$ amp
- small wires
- little pole to hold the little wires

Electric Meters – Measure Electricity Used

Old Meter Style – Needle Points to Number

New Meter Style

Read meter from left to right

Notice some numbers go clock-wise, some go counter clock-wise

Read two months, subtract to find kilowatt hours used

Calculating an Electric Bill

PAGE ONE

CURRENT CHARGES

- **GREEN** for electric
- **BLUE** for gas
- **DARK GRAY** for taxes and fees
- **GRAY** for other charges and credits (when applicable)

SUPPLIER CONTACT INFORMATION

(if other than BGE)
Refer to the choice ID when choosing an electric or gas supplier

CONTACT US BGE.COM
 Customer Service: 800.685.0123
 800.735.2258 (TTY-TDD)
 Correspondence: P.O. Box 1475 Baltimore, MD 21203

Bill Summary

Page 1 of 3

John Q Customer
 123 Anywhere St
 Baltimore, MD 21204-0000
 Account # 0000000000
 Issued Date: June 11, 2016

CUSTOMER INFORMATION

Previous Balance	\$66.99
Payments Received June 2, 2016	-\$66.99
BGE Outstanding Balance	\$0.00
Electric	\$87.32
Gas	\$23.11
Other charges and credits (See details)	-\$12.50

BILL SUMMARY

- Issued date
- Payments received
- Outstanding balance
- Current billing period charges
- Late charge—applied if your bill is not paid by the due date

Total amount due by July 6, 2016 **\$97.93**

Payment received after July 6, 2016 will incur a late charge.
 A late payment charge is applied to the unpaid balance of your BGE charges. The charge is up to 1.5% for the first month; additional charges will be assessed on unpaid balances past the first month, not to exceed 5%.

Conserving Electricity

1. Unplug devices you're not using.
2. Turn off unnecessary lights.
3. Replace your old light bulbs with energy-efficient LEDs.
4. Only run full loads of laundry and dry clothes on a line.
5. Take shorter showers.
6. Not home? Turn off the air conditioner.
7. Skip the heat-dry setting for the dishwasher.
8. Thaw your frozen foods before you cook them.

Stations

1. Power Generation and Distribution – 40 min
2. **Household Electrical –40 min**

Electrical Terms

- Switch-Electronic or Mechanical means for opening and closing a circuit.
- Fuse-A device that protects a circuit from over-current by melting a link in the device.
- Circuit Breaker-A device that protects a circuit for over-current by opening the circuit with a switch.

Circuit Breaker Box

6/21/2022

Circuit Current Rating

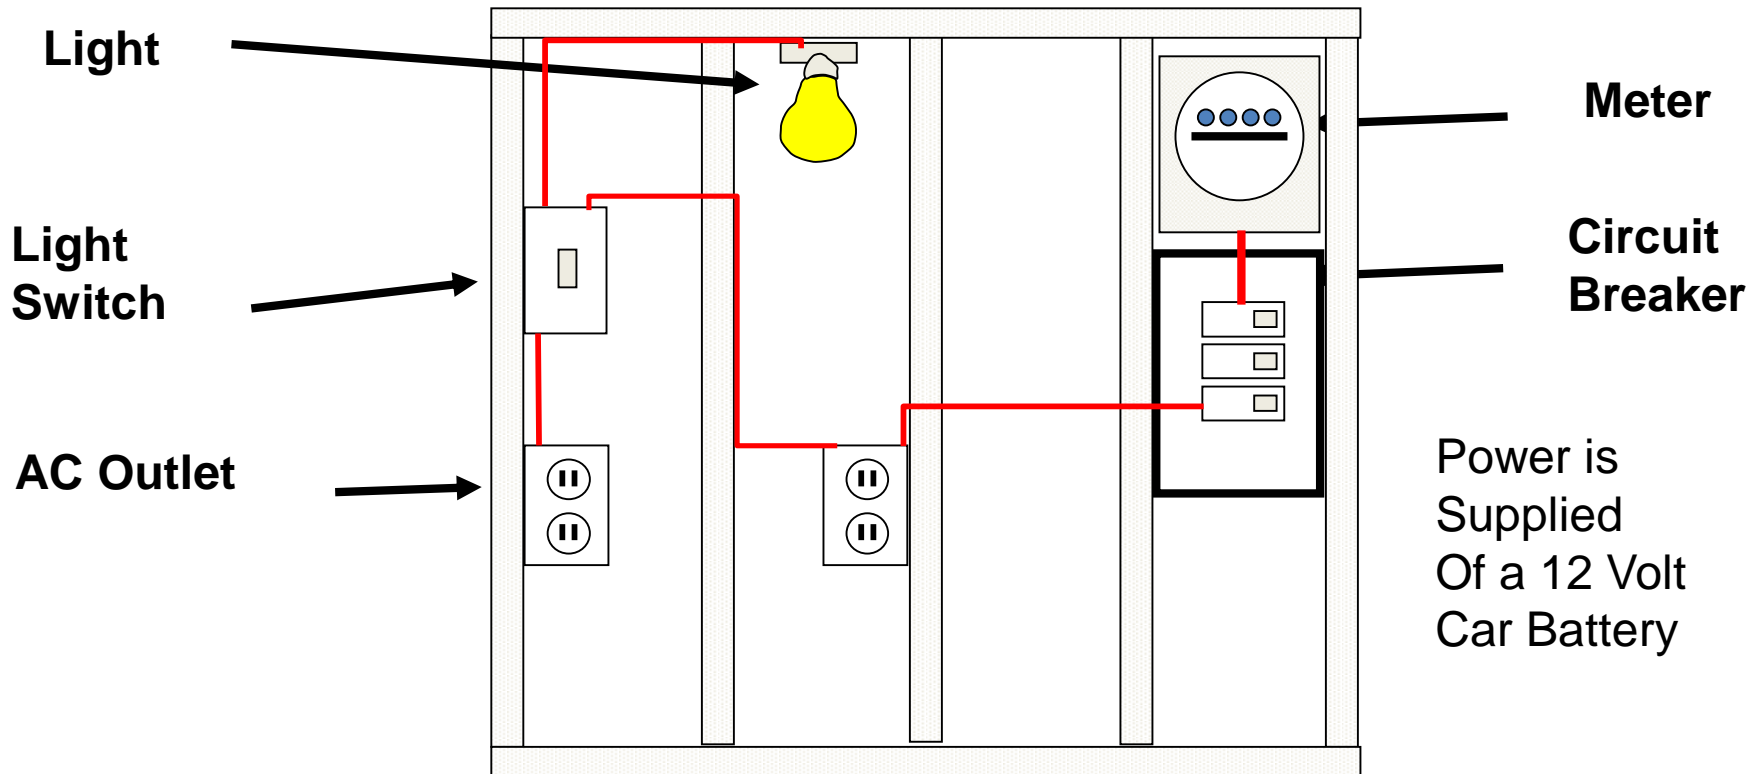

Tripped Breaker or Blown Fuse

- An overloaded circuit is the most common reason for a tripped breaker
- It occurs when a circuit is attempting to draw a greater electrical load than it is intended to carry.
- When too many appliances or light fixtures are operating at the same time
- The internal mechanism heats up, and the breaker "trips"
- To find a tripped breaker, look at your panel for a breaker that is now in the "off" position or between "on" and "off."
- If it's placed in between, move the breaker to the "off" position before returning it to the "on" position.

House Wiring Demonstration

Household Wiring - Switches

On-Off – Single pole, single throw

3-way Switch –
Single pole,
double throw

Dimmer switch –
adjust the light level
using a slide or dial

Household Wiring - Outlets

Ungrounded

Grounded

Tamper Resistant

Surge Suppressor/USB

GFCI Outlet

240V Outlet

Dryer - 30A

Oven - 50A

GFCI

- Ground Fault Circuit Interrupter – Prevents shock by quickly shutting off power if there is a spike in the current
 - Protects against short circuits, especially through water
 - Should be used in Kitchens, baths, laundry, basements, crawlspaces, and outdoors
 - Could use a GFCI Circuit Breaker instead

Electrical Terms

- **Short Circuit** - An abnormal connection of low impedance (resistance) between two points of different potential
- **Ground** - A point of common connection of zero volts often the earth

Electrical Power and Energy

Power

- Watt- Power to do work at 1 joule/sec
- $W = V \times I$
- $KW = 1000 W$

Energy (Power delivered over a period of time)

- $KW * Hr = 1 KW$ of power delivered for 1 hour

House Wiring

Determine if the circuit breaker is overloaded. Calculate total power on the Circuit.

Watts = Volts * amps

Amps = $\frac{\text{Watts}}{\text{Volts}}$

Refrig
400 Watts

Toaster
1200 Watts

TV
300 Watts

Microwave
600 Watts

Refrig.

Microwave

Power = _____ + _____ + _____ + _____ = _____ Watts/hour

Amps = $\frac{\text{watts}}{\text{volts}}$ = _____ = _____ amps Overload Yes or No _____

120VAC

Electrical Wiring – Drawing Example

- 1 Stove
- 2 Outlets
- 3 Light

In room, draw electrical outlets, switches, and lights. Draw only one side of electricity called the Hot side. Also show doors and windows.

Requirement 8

	Electrical switchbox	S	Single Pole Switch
	Three-Way Switch		SinglePlex Receptacle
	Duplex Receptacle		Duplex Receptacle WP= Waterproof
	GFCI Duplex Receptacle		Isolated Ground Receptacle
	Switched Receptacle		FourPlex Four Gang Receptacle
	240-Volt Receptacle		Ceiling Mounted Light Fixture PC= Pullchain
	Wall-Mounted Light Fixture		Recessed Light Fixture
	Weatherproof Light Fixture		Fluorescent Light Fixture
	Ceiling Fan		Combination Light & Fan
	Power Vent Fan		Electric Motor Number=HP
	Smoke Detector		Circuit Breaker
	Telephone Jack		Doorbell Transformer
	Doorbell Pushbutton		Ground

- Draw a simple floor plan of a room in your house with lights, switches, and electrical outlets penciled in.
- Then use the electrical wiring symbols to draw in the overhead and wall lights and to show where electric switches and electrical outlets are located.

Requirement 8

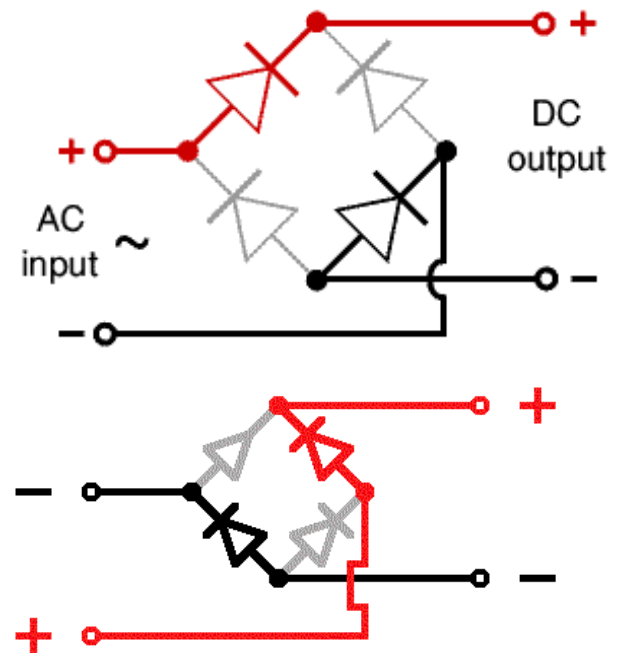

- Ask a parent or guardian to go to the main breaker box and turn off the circuit that supplies power to the room you have chosen.
 - Turn on the lights in the room before the adult flips off the circuit breaker.
 - If there is more than one circuit breaker that corresponds to the room, note which breaker supplies power to what outlets, lights, and switches by checking them while the power is off.
- To the side of your room drawing, make a box and highlight the circuit breakers that supply power to the room.

Requirement 10

Rectifier

- An electrical device which converts an alternating current into a direct one by allowing a current to flow through it in one direction only.

Requirement 10

Rheostat

- A resistor built so that the current traveling through the circuit can be adjusted at will. Volume controls and dimmer switches are examples.

Battery and Electric Bell
